## **KONI ANNOUNCES NEW SPECIAL ACTIVE DAMPER LINE**

KONI Shock Absorbers, a global leader in suspension damping technology, introduces their new Special ACTIVE damper product line for Passenger Cars, Light Trucks and SUVs. As the latest advancement in KONI's world-renowned portfolio of performance suspension solutions, Special ACTIVE struts and shocks will be available starting June 2018.

KONI Engineering took the latest generation of KONI's proven, patented Frequency Selective Damping Technology (ACTIVE Technology) and integrated it into already high-performing KONI Special dampers resulting in a new product line that provides an unparalleled ride and handling experience. The Special ACTIVE damper adapts to changing road surfaces to provide superior comfort and handling.

"The KONI front and rear dampers, with Frequency Selective Damping Technology, optimize the driving experience by offering greater road holding, handling, stability and comfort, guaranteeing maximum safety in all conditions", said Concetto Maletta, Design Responsible Engineer, Fiat Chrysler Automobiles.

Your car will be more responsive and your ride will be smoother over imperfect road surfaces. Handling, comfort, and grip: all improve with Special ACTIVE.

KONI's ACTIVE Technology rivals the expensive electronic ride control systems built into many new cars at a fraction of the price. Additionally, those complicated electronic damping systems cannot be retrofitted into existing vehicle applications, whereas KONI Special ACTIVE dampers have a broad range from older cars through modern sedans, light trucks, and SUVs.

### **About the patented Frequency Selective Damping Technology**

Since its introduction, KONI's patented technology has been continually developed and upgraded. The KONI ACTIVE Technology has been embraced by many automobile manufacturers worldwide including Alfa Romeo, Mercedes-Benz, Jeep, Fiat, Opel, Abarth, Lamborghini and Ferrari. Well over 1.5 million cars, buses, trucks and recreational vehicles have already been factory equipped with Frequency Selective Damping Technology dampers.

### **About KONI**

As a part of ITT Motion Technologies, and as they've been doing for over 80 years, KONI develops, manufactures, and markets high performance shock absorbers for many types of private and commercial vehicles, including street and racing cars, trucks, buses, recreational vehicles, and military vehicles as well as high speed trains. ITT Motion Technologies is a world leader in the development and production of components for the transport and automobile industry.
